

WESTERN DREDGING ASSOCIATION

Takes Pleasure in presenting WEDA's Silver Award for the 2013 Environmental Excellence Award for Navigation Dredging to the Project Team for:

Port of Long Beach Middle Harbor Redevelopment

For the successful comprehensive Middle Harbor Sediment Management Plan and Project that includes construction of approximately 65 acres of new land for a marine container terminal, requiring approximately 2.5 million cubic yards of fill material—dredged sediments. Approved by the Contaminated Sediments Task Force, the Plan detailed the logistical, technical, and legal requirements for acceptance of fill material from dredged material from no less than 11 individual projects along the southern California coast. The total volume of third party contaminated dredged material placed in Middle Harbor is nearly 1 million cubic yards.

The Middle Harbor Fill Site was successful in providing a greater than 90% beneficial reuse rate for all dredged material produced in the Los Angeles and Orange County region for the past 2 years.

Congratulations for a great project!
